# WLAN Technology Introduction

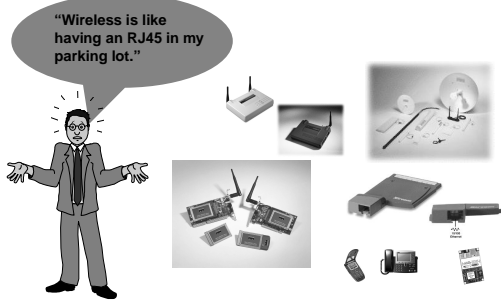

Cisco.com

3

## Wireless LAN components

Cisco.com

"Wireless is like having an RJ45 in my parking lot."

Cisco.com

4

## WLAN "Alphabet Soup": IEEE 802.11 Standards Activities

Cisco.com

- 802.11a: 5GHz, 54Mbps
- 802.11b: 2.4GHz, 11Mbps
- 802.11d: Multiple regulatory domains
- 802.11e: Quality of Service (QoS)
- 802.11f: Inter-Access Point Protocol (IAPP)
- 802.11g: 2.4GHz, 54Mbps
- 802.11h: Dynamic Frequency Selection (DFS) and Transmit Power Control (TPC)
- 802.11i: Security
- 802.11j: Japan 5GHz Channels (4.9-5.1 GHz)
- 802.11k: Measurement

Cisco.com

5

## Agenda

Cisco.com

- **WLAN Technology Introduction**
- **WLAN Security Issues**
- **WLAN Security Solutions**
- **WLAN and VPN**
- **Q&A**

Cisco.com

6

## WLAN Security Hierarchy

Cisco.com

**Open Access**  
No Encryption,  
Basic Authentication

Public "Hotspots"

**Basic Security**  
40-bit or 128-bit  
Static WEP Encryption

Home Use

**Enhanced Security**  
802.1x,  
TKIP Encryption,  
Mutual Authentication,  
Scalable Key Mgmt., etc.

Enterprise

Remote  
Access

Virtual  
Private  
Network  
(VPN)

Business  
Traveler,  
Telecommuter

8

## Wireless LAN Security Issues

Cisco.com

**Hacking into WEP**

**"War Driving"**

Credit: KNTV San Jose

© 2003, Cisco Systems, Inc.

Cisco.com

9

## Wardriving ...

Cisco.com

... is possible as it has been proven by "War driving" exercise in SFO:

= cruising with a car +  
laptop + WLAN card

+ GPS scanning for  
(unprotected) 802.11  
wireless networks.

+ Perl script to log the  
SSID, AP's MAC address,  
best S/N ratio and  
location (GPS).

Cisco.com

10

## Media Attention to Rogue APs Wardriving

Cisco.com

War Driving (wôr drivin) v.  
1 Driving around looking for unsecured wireless  
networks.  
- term coined by Pete Shipley

- 12,600 hits on google for wardriving
- Most wardrivers use NetStumbler to find, map (using GPS),  
and upload locations of discovered APs to online database
- NetStumbler is a free download for Windows and WinCE

Mobile Netstumbler Kit w/PC Card

<http://www.wirelesscentral.net/aprod/STUM-ANTW.html?ns>

Cisco.com

13

## Media Attention to Rogue APs WarChalking

Cisco.com

### What is Warchalking?

• Warchalking is the process of looking for wireless computer networks and making chalk marks to indicate their locations so that others can more easily find them.

• <http://www.warchalking.org/>

• Online community containing descriptions and photos of warchalked sites

• 12,100 hits on Google for "warchalking"

© 2003, Cisco Systems, Inc.

Cisco.com

14

## Service Set Identifier (SSID) in 802.11b

Cisco.com

- 32 ASCII character string
- Sent in the clear
- Commonly used feature for WLAN identification
- May be advertised or manually pre-configured at the station

- Serves to logically segment the users and Access Points that form part of a Wireless subsystem.

- **Is NOT a security feature!**

© 2003, Cisco Systems, Inc.

Cisco.com

15

## Wire Equivalent Privacy (WEP)

Cisco.com

- Uses the RC4 stream cipher of RSA Data Security for encryption.
- RC4 Keystream = (24 bits IV, WEP Key)
- Key must be shared by both the encrypting and decrypting endpoints.
- IEEE 802.11b has chosen to use 40-bit keys. Several vendors Cisco support 128-bit WEP encryption with their WLAN solutions. Cisco in HW (3 % degradation only)
- Key distribution or key negotiation is not mentioned in the standard.

© 2003, Cisco Systems, Inc.

Cisco.com

16

## Papers on WLAN Security

Cisco.com

\* "In practice, most installations use a single key that is shared between all mobile stations and access points. More sophisticated key management techniques can be used to help defend from the attacks we describe..."  
— University of California, Berkeley report on WEP security, <http://www.isaac.cs.berkeley.edu/isaac/wep-faq.html>

© 2003, Cisco Systems, Inc.

Cisco.com

17

## Airsnort

Cisco.com

- Capture enough packets
- Crack phase
- For every byte of the key, there are 256 weak IVs.
- 13 key bytes \* 256 = 3315 packets to get all weak keys
- You do not need sometimes all of the weak keys to break the WEP key

© 2003, Cisco Systems, Inc.

Cisco.com

18

## Limitations of 802.11 Security

Cisco.com

### Authentication

- Authentication is device-based, not user-based
- Client does not authenticate network
- Existing authentication databases are not leveraged

### Key management

- Keys are static
- Keys are shared among devices and APs
- If adapter or device is stolen, all devices and APs must be rekeyed

### RC4-based WEP keys

- Encryption algorithm is vulnerable to attack
- Message integrity is not ensured

© 2003, Cisco Systems, Inc.

Cisco.com

19

## Agenda

Cisco.com

Cisco.com

20

## Addressing the Limitations: 802.11i

Cisco.com

### Authentication

- Authentication is device-based, not user-based
- Client does not authenticate network
- Existing authentication databases are not leveraged

### Key management

- Keys are static
- Keys are shared among devices and APs
- If adapter or device is stolen, all devices and APs must be rekeyed

### 802.1x

### RC4-based WEP keys

- Encryption algorithm is vulnerable to attack
- Message integrity is not ensured

### TKIP and AES

© 2003, Cisco Systems, Inc.

Cisco.com

21

## Security Enhancements for RC4 based WEP

Cisco.com

- Security Enhancements to Strengthen RC4-Based WEP Keys:
  - Message Integrity Check (MIC)
  - Key Hashing or Temporal Key (TK) of TKIP
  - Linear Initialization Vector (IV) Sequencing
  - Broadcast Key rotation

© 2003, Cisco Systems, Inc.

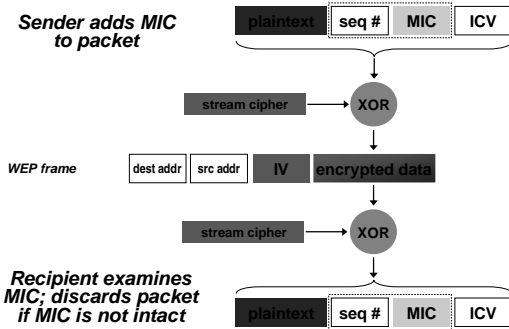

Cisco.com

22

## Message Integrity Check (MIC)

Cisco.com

Sender adds MIC to packet

© 2003, Cisco Systems, Inc.

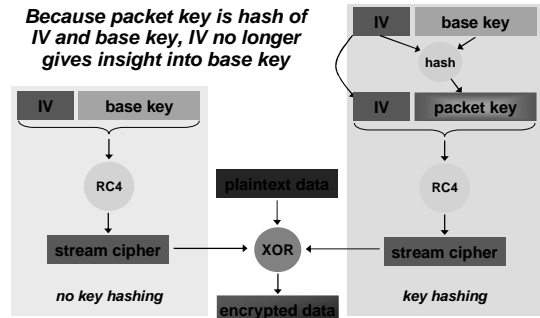

Cisco.com

23

## TKIP: Key Hashing (Per-Packet Keys)

Cisco.com

Because packet key is hash of IV and base key, IV no longer gives insight into base key

© 2003, Cisco Systems, Inc.

Cisco.com

24

## WEP enhancements - TKIP/MIC

**WEP Security enhancements:**

- TKIP (Temporal Key Integrity Protocol) hashing to address WEP key vulnerabilities
- MIC (Message Integrity Check) to address bit flipping and replay attacks

## Linear IV Sequencing

- Instead of random collision times, move through the IV listing in a linear fashion
- Broadcast key must be rotated before utilizing the entire IV space (~min 2.03h, optimal 10h)
- Added benefit is that if packet is using the previous IV, it will be rejected because the transmitter is expecting the next linear IV

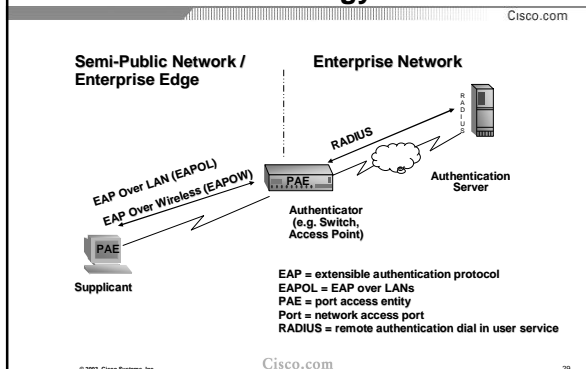

## Broadcast Key Rotation

- Static Broadcast Key is vulnerable to FMS attack over time
- Similar to static WEP Keys
- Using Broadcast Key rotation will prevent static WEP users from functioning correctly.
- Broadcast Key = Hash (seed, ap\_mac\_addr, #boots)

## IEEE 802.1x Defined Port based network access control

- 802.1x is an IEEE Standard for Port Based Network Access Control
- Falls under 802.1 NOT 802.11
- NETWORK standard, not a wireless standard
- Provides Network Authentication, NOT encryption
- Improved authentication: different methods
- Works on 802.3 LAN switch or 802.11b WLAN AP
- To be used for centralized user administration

## IEEE 802.1x Terminology

## EAP Defined - RFC 2284

- Extensible Authentication Protocol is an extension of CHAP/PAP within PPP
- Support multiple "authentication" schemes:
  - plain password hash (MD5)
  - token cards
  - GSS-API (Kerberos)
  - TLS (based on X.509 certificates)

## 802.1x Extensible Authentication Protocols

Cisco.com

- **EAP-MD5 (Message Digest 5)**  
Supported in Win 2K/XP and, soon, other Windows versions  
Does not provide mutual authentication nor WEP key derivation
- **EAP-Cisco Wireless, or LEAP**  
Supported client in WinXP/2K/NT/ME/98/95/CE, Linux, Mac, DOS.  
Provides mutual authentication and WEP key derivation
- **EAP-TLS (mutual EAP-TLS)**  
Supported in Win 2K/XP and, soon, other Windows versions  
Requires client certificates and server certificates
- **PEAP**  
Supported in XP and, soon, other Windows versions  
Uses server-side TLS, which requires only server certificates
- **EAP-TTLS**  
Is supported by Funk Software's Odyssey  
Uses server-side TLS

© 2003, Cisco Systems, Inc.

Cisco.com

35

## EAP-TLS

Cisco.com

© 2003, Cisco Systems, Inc.

Cisco.com

36

## What is PEAP?

- **PEAP = Protected EAP (Extensible Authentication Protocol)**
- 802.1x - based authentication protocol based on EAP
- Leverages server-side EAP-TLS using digital certificates
- Supports a variety of different client authentication methods, including log-on passwords and *one-time passwords* (OTPs)
- Initial support on Windows XP and Cisco W2K/XP client
- Based on a RFC Draft jointly submitted by Cisco Systems, Microsoft and RSA Security to the IETF

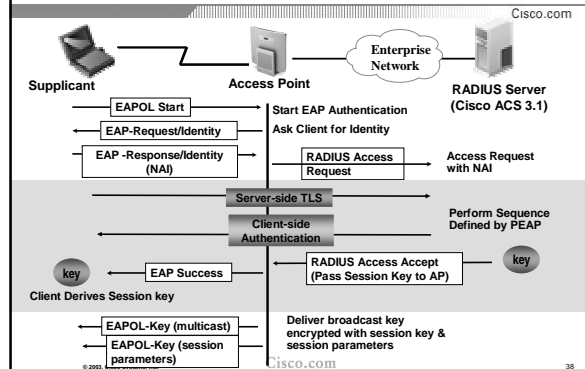

© 2003, Cisco Systems, Inc.

Cisco.com

37

## PEAP - Two Phase Authentication

© 2003, Cisco Systems, Inc.

Cisco.com

38

## Client support for 802.1x

	802.1x	LEAP (using Cisco Aironet drivers)	Cisco PEAP (using Cisco Aironet Drivers)	Microsoft PEAP (using OS drivers)
Cisco Products				
Cisco Aironet NICs	now	now	5.65.001	n/a
Cisco Aironet APs	now	now	11.237	firmware upgrade to AP
Cisco Secure ACS	now	now	3.1	3.2
Operating Systems (using OS drivers)				
Windows XP	now	now	now	now
Windows 2000	now	now	once MSFT releases EAP-TLS supplicant on other OSs	- Q2-Q3 '03
Windows NT	now	now	once MSFT releases EAP-TLS supplicant on other OSs	- Q2-Q3 '03
Windows 98	now	now	once MSFT releases EAP-TLS supplicant on other OSs	- Q2-Q3 '03
Mac OS	MAC OS X	now	-	-
Solaris	www.open1x.org	n/a	-	-
Linux	www.open1x.org	now	-	-
User Databases (w/ CiscoACS Auto-Server)				
CiscoSecure ACS	n/a	now	3.1	3.2
MSFT Backend Database	n/a	now	currently in beta	currently in beta
OTP	n/a	n/a	now	n/a
802.1x RADIUS Server	n/a	n/a	not committed	n/a
Kerberos	n/a	n/a	not committed	n/a
LDAP	n/a	n/a	now	n/a
NDS	n/a	n/a	now	n/a

© 2003, Cisco Systems, Inc.

Cisco.com

39

## What is the role of the RADIUS Server

- WEP key is calculated by the RADIUS server, only after the authentication is completed
- The key is passed to access point for THAT single authenticated client; this is a session key
- Client calculates the same WEP key
- Key is never transmitted over RF

© 2003, Cisco Systems, Inc.

Cisco.com

40

## How Often to Change Key

- Every time a client roams to a new AP, it will go through the same authentication and get new WEP session key
- RADIUS server will also require a new authentication / key at a pre-defined time interval (Attribute 027, Session-Timeout)
- This provides different and totally unique WEP key to each client

© 2003, Cisco Systems, Inc.

Cisco.com

41

## 802.1x EAP Authentication Comparison

	LEAP	PEAP	EAP-TLS
Multi-Operating System Support	Yes	No	No
Single Sign On For Windows Login	Yes	No	Yes
Dynamic WEP Key and Mutual Authentication	Yes	Yes	Yes
Static Password Support	Yes	Yes	No
One Time Password Support	No	Yes	No
SERVER Certificate Required	No	Yes	Yes
CLIENT Certificate Required	No	No	Yes
Layer 3 Roaming Support	Yes	Yes	Yes
MS Windows Password Change	No	Yes	No
Microsoft Backend DB Support	Yes	Yes	Yes
LDAP/MS Backend DB Support	No	Yes	Yes

Cisco.com

44

## Addressing the Limitations: 802.11i

Cisco.com

### Authentication

- Authentication is device-based, not user-based
- Client does not authenticate network
- Existing authentication databases are not leveraged

### Key management

- Keys are static
- Keys are shared among devices and APs
- If adapter or device is stolen, all devices and APs must be rekeyed

© 2003, Cisco Systems, Inc.

Cisco.com

45

## Wi-Fi Protected Access (WPA)

Cisco.com

- WPA is the biggest thing to happen to WLAN security since Cisco LEAP
- Cisco has supported the base technologies of WPA longer than any other vendor
- All new products after Aug.'03 MUST have WPA  
Existing products are grandfathered
- 802.11i-standard TKIP + 802.1X authentication
- There is a non-802.1X version of WPA for home use which is unsuitable for enterprises

Cisco.com

47

## VPN over WLAN Infrastructure

Cisco.com

### Definitions and Scope:

- VPN = IPsec based VPN
- WLAN = 802.11 based access

© 2003, Cisco Systems, Inc.

Cisco.com

48

## When to use VPN over WLAN?

Cisco.com

- In mixed client environments
- Where security is more important than performance or usability
- Home office, remote telecommuters, medium design, large scale designs...

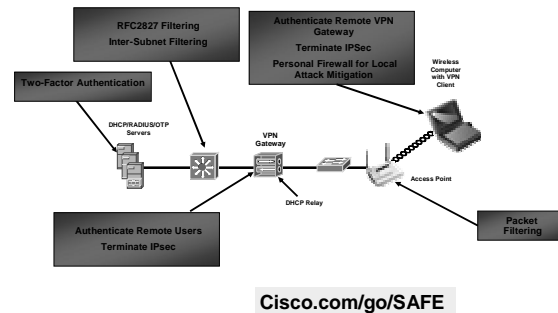

© 2003, Cisco Systems, Inc.

Cisco.com

49

## Generic VPN WLAN Design

## WLAN Security White Papers

Cisco.com

### Wireless LAN Security & the Cisco Wireless Security Suite

A Comprehensive Review of 802.11 Wireless LAN Security and the Cisco Wireless Security Suite

Author: Rajan Bhatia, Wireless Networking Product Manager in the author of this white paper.

Abstract: This white paper provides a comprehensive review of 802.11 Wireless LAN Security and the Cisco Wireless Security Suite. It covers the various security protocols and technologies used in 802.11 WLANs, including WEP, WPA, and WPA2. It also discusses the challenges of securing 802.11 WLANs and the role of the Cisco Wireless Security Suite in addressing these challenges.

Keywords: 802.11, Wireless LAN, Security, Cisco Wireless Security Suite, WEP, WPA, WPA2.

### SAFE for Wireless (updated Mar. '03)

SAFE: Wireless LAN Security in Depth

Abstract: This white paper provides a comprehensive review of 802.11 Wireless LAN Security and the Cisco Wireless Security Suite. It covers the various security protocols and technologies used in 802.11 WLANs, including WEP, WPA, and WPA2. It also discusses the challenges of securing 802.11 WLANs and the role of the Cisco Wireless Security Suite in addressing these challenges.

Keywords: 802.11, Wireless LAN, Security, Cisco Wireless Security Suite, WEP, WPA, WPA2.

or [Cisco.com/go/SAFE](http://Cisco.com/go/SAFE)

## VPN Security for WLANs

Cisco.com

### VPN/WLAN On Campus - Pros

- **Familiar**: Is in use at most enterprises. Makes user interface consistent for both WLAN & remote access.
- **Trusted for authentication & privacy**: Supports central security management. Ensures 3DES encryption from client to concentrator.
- **Compatible with wide range of client devices from multiple vendors**

### VPN/WLAN On Campus - Cons

- **Cost**: Requires VPN concentrators behind APs.
- **Performance**: Client software encryption lowers throughput.
- **Roaming**: Roaming between VPN concentrators forces application restarts.
- **QoS**: All traffic is IPsec traffic; no QoS, multicast, or multiprotocol support.
- **Client Devices**: Not supported on phones, scanners, or other specialized devices.
- **Convenience**: Additional steps required beyond Windows login.
