Running the FDDI deinstall Script

The FDDI deinstall script reverses the FDDI software installation process. You may want to reverse the installation process if you remove the SBus adapter from a SPARCstation.

Note If you previously disabled the Ethernet interface by renaming the /etc/hostname.le0 file to /etc/hostname.*xx*0, you may want to rename /etc/hostname.*xx*0 to /etc/hostname.le0 to re-enable the Ethernet interface.

Running the FDDI deinstall Script (SunOS)

Run the FDDI deinstall script as follows:

Step 1 Log in as superuser. Change to the /usr/local/cfddi directory and enter the following command:

```
./deinstall.fddi
```

Step 2 Follow the onscreen instructions to deinstall the FDDI software.

deinstall Script Example

The following is an example of the ./deinstall.fddi script:

```
console# ./deinstall.fddi

   You have invoked the deinstall.fddi script.
   Which is used to deinstall software for FDDI SBus Adapters.

 Is this deinstall for a diskless station (y/n) [n] ?

   The following files will be restored to the state
   they were in before the FDDI software was installed.
        1) /etc/rc.local
        2) /etc/loadable
        3) /usr/kvm/sys/sun4m/conf/files
        4) /vmunix

   Do you wish to restore these files now (y/n) [y] ?

   Removing startup of snmpd.cfddi from /etc/rc.local
   Removing ifconfig fddi0 from /etc/rc.local
   Removing fddi.LOAD from /etc/loadable

   The hostname(s) added during the FDDI installation should be removed
   from the /etc/hosts file and, if necessary, the NIS data base(s).

   Do you wish to update the /etc/hosts file now (y/n) [y] ?

 The following files were added during the FDDI software installation.
        1) /etc/snmpd.cfddi
        2) /etc/snmpd.cfddi.conf
        3) /etc/hostname.fddi*
        4) /etc/fddistat
        5) /usr/kvm/sys/sun4m/conf/FDDI
        6) /usr/kvm/sys/sunif/fddi_conf.c
        7) /usr/kvm/sys/sun4m/OBJ/if_fddi.o
        8) /usr/kvm/sys/sun4m/FDDI/*
        9) /dev/fddi*

   Do you wish to remove these files now (y/n) [y]?

    Removing files ...     restoring tcp_sendspace && tcp_recvspace to 4K
done.

   Deinstallation done.  Reboot machine to restore original kernel.
   A log of the deinstallation is in /tmp/./deinstall.fddi.log

console#
```

Running the pkgrm Script in Solaris 2.x

To remove the Solaris 2.x FDDI SBus driver, use the Solaris pkgrm utility. To remove the FDDI driver, enter the following command:

```
pkgrm SBUSfddi
```

⚠️ **Caution**   Before you run the pkgrm utility, make sure you unmount all NFS mounted file systems across the FDDI network.

pkgrm Script Example

The following text are examples of the pkgrm SBUSmibs, SBUSfddi, and SBUSsnmp scripts:

```
console# pkgrm

The following packages are available:
  1  CSCOmibs      Solaris 2.X Mibs
                   (sparc) 4.1
  2  SBUSfddi      Solaris 2.X FDDI Driver
                   (sparc) 3.1
  3  SBUSsnmp      Solaris 2.X FDDI SNMP Agent
                   (sparc) 4.1
  4  SPROacomp     SPARCompiler Component-1
                   (sparc) 2.1
  5  SPROcc        SPARCompiler C
                   (sparc) 2.1
  6  SPROlang      SPARCompiler Component-2
                   (sparc) 2.1
  7  SPROlics      SunPro Licensing Module
                   (sparc) 2.2
  8  SPROutool     SPARCompiler Component-3
                   (sparc) 2.1
  9  SUNWabe       Solaris 2.4 User AnswerBook
                   (all) 8.22.8
 10  SUNWaccr      System Accounting, (Root)
                   (sparc) 11.5.1,REV=94.07.15.22.10
```
